U.S.A.

June 25, 1986

Dear Professor Ferrater Mora,

Reidel will shortly take into production a multi-authors monograph entitled An Architectonic for Science written by W. Balzer, C.U. Moulines and J.D. Sneed. The book has come out of years of intense research and assembling material for the so-called "structuralist program". I have reason to believe that it could be used as a reference book and, consequently may have a wider audience than usual for our books. If I am correct, it might be worthwhile making the book also available for students in a paperback edition. On this point, I am now seeking advice.

I have taken the liberty of sending to you under separate cover copies of the table of contents, Preface and Overview. I am hoping that you can spare me a little of your time to go through this material and to let me know your thoughts on the potential audience for the book. Would you want to use it in your course or recommend students to buy it? Also, do you feel that the title "An Architectonic for Science" gives adequate information about the contents? I have a full copy of the manuscript on hand and could send to you samples from it, should you wish to see more of the text.

I would be most grateful for your reaction to the above and I look forward to it with great interest.

Yours sincerely,
D. REIDEL PUBLISHING COMPANY
